DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: In page 7, line 4; "overcover" should be replaced with --cover--.

Appropriate correction is required.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4 of U.S. Patent No. 6,596,565 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because Hembree discloses an assembly method for a Chip On Board semiconductor device having a semiconductor die having a heat sink cap abutting a portion of a top surface of a substrate including; placing a compliant adhesive-filled gel

Art Unit: 2812

silicone elastomer including cross-linked silicon between a portion of an upper surface of the semiconductor die and a portion of the lower surface of the heat sink cap; pressing the semiconductor die into the heat sink cap to engage the semiconductor die and the heat sink cap in compliant removable adhesion and for causing the edge of the heat sink cap to abut the substrate; and injecting an encapsulant into the heat sink cap engaging at least interior portions of the heat sink cap, at least portions of the semiconductor die, at least portions of the top surface of the substrate, and at least portions of the compliant adhesive-filled gel silicone elastomer (see Hembree, claims 1-4).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pompeo et al., Distefano, Toy et al. and Mitchell disclose methods for attaching heat sinks to semiconductor devices using silicone.
